SUMMARY

Informatics student at President University specializing in Cybersecurity, seeking a cybersecurity internship in security operations, risk assessment, or GRC. Hands-on experience with SIEM-based log monitoring, NIST CSF-aligned risk assessments, vulnerability and web-application security review, and incident-response workflows through self-directed labs and coursework. Comfortable applying Python to support security analysis and automation, with a working understanding of network security and OWASP Top 10 principles.

TECHNICAL SKILLS

Security Operations & Analysis: SIEM log monitoring (Elastic SIEM), detection engineering, incident response, vulnerability assessment, network security, security auditing

Frameworks & Standards: NIST CSF, OWASP Top 10, RBAC, MFA, JWT, BCrypt

Security Tools: Wireshark, Nmap, Burp Suite, Safeline WAF, TryHackMe labs, Kali Linux

Programming (supporting skills): Python, JavaScript/TypeScript, SQL, Flask, C++

Platforms & Other: Linux, Networking, Git/GitHub

EDUCATION

President University | Bachelor of Informatics, Cybersecurity Track | 2024 – 2027

GPA: 3.71 / 4.00

- Relevant Coursework: Network Security, Cryptography, Risk Management, Web Development

CYBERSECURITY PROJECTS

AI-Assisted Risk Assessment & Security Audit Platform | *Python, Risk Scoring, NIST CSF*

- Built a Python-based platform for structured cybersecurity risk assessments, with automated risk scoring and vulnerability tracking mapped to the NIST Cybersecurity Framework's five core functions (Identify, Protect, Detect, Respond, Recover).
- Generated prioritized, client-ready remediation steps and audit reports directly from assessment results, reducing manual write-up work.

SOC Homelab | *Elastic SIEM, Windows, Kali Linux*

- Configured a hybrid SOC home lab shipping logs from Windows and Kali Linux VMs into an Elastic Cloud SIEM.
- Practiced detection engineering, log analysis, and incident-response workflows by building and testing custom detection rules against simulated attack activity.

Hookline — Phishing Detection Chrome Extension | *TypeScript, Chrome Extension APIs*

- Built a Chrome extension that detects phishing emails and malicious URLs in real time by parsing message content and links directly in the browser.
- Implemented typosquatting, homoglyph, and brand-impersonation detection logic with explainable output showing why a link or sender was flagged.

SEMIS — Secure Employee Management Information System | *Node.js, React, MongoDB*

- Applied security controls — email-OTP multi-factor authentication, AES-256 encryption at rest, role-based access control (RBAC), and JWT-based session authentication — to an HR system covering employee records, attendance, payroll, and leave management.
- Aligned implementation with OWASP Top 10 best practices.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate
- AWS Security Fundamentals
- Information Security Certification (freeCodeCamp)

LANGUAGES

- English — Professional Working Proficiency
- Bahasa Indonesia — Basic
