SUMMARY

International student at President University concentrating in Cybersecurity, with hands-on experience spanning vulnerability detection, security investigation, and secure backend development. Interested in application security and secure system design, with a longer-term focus on security architecture.

EDUCATION

President University, Indonesia

Bachelor of Information Technology, Cybersecurity Concentration

Relevant Coursework: Network Security, Cryptography, Risk Management, Web Development

Expected Graduation: 2027

GPA: 3.73/4.00

EXPERIENCE

ElectraWireless

September 2026 - Present

Cybersecurity Intern

- Built a malware detection feature for an IoT firmware vulnerability scanner using SHA-256 hash comparison, integrating it into the existing firmware extraction pipeline.
- Developed automated tests covering known malware hashes, unknown files, and a seeded benign signature, and converted an ad hoc network-scanner script into a pytest suite while fixing an IPv6 parsing issue affecting live scans.
- Collaborated in a multi-contributor Git workflow, integrating cross-team changes and maintaining a regression test suite of more than 130 tests across successive integrations.

FlyRank

2026

Backend Engineering Intern, Task-Based Internship

- Implemented HMAC-SHA512 webhook verification and idempotency controls for Midtrans payment processing on the FlyRank Billing Engine, reducing the risk of unauthorized or duplicate payment events.
- Built usage metering, subscription quotas, and tenant data isolation across Free and Pro plans using FastAPI, PostgreSQL, SQLAlchemy, and Alembic, validated with 68 automated tests.
- Developed a Python web scraper and a CRUD API with schema validation, caching, retry logic, and Docker-based deployment, using Pytest for fixture-based and failure testing.

PROJECTS

SEMIS - Secure Employee Management Information System

- Designed a secure employee management application implementing MFA, JWT authentication, role-based access control, and encryption to protect employee data.
- Built authorization and access controls around core employee management functions with a focus on secure application design.

Hookline - Phishing and Email Security Analysis

- Built a phishing and suspicious URL and email analysis project to detect indicators of email-based social engineering attacks and surface security findings.

AI-Assisted Risk Assessment & Security Audit Platform

- Built a Flask and SQLite platform mapping 51 security controls to the NIST Cybersecurity Framework, supporting security control assessment, evidence collection, and audit report generation.
- Implemented role-based access and local Ollama-based AI assistance to help explain security controls and findings.

WAF HomeLab (SafeLine)

- Deployed and configured a SafeLine Web Application Firewall home lab to test traffic filtering and attack detection and prevention for web application protection.

CERTIFICATIONS

Google Cybersecurity Professional Certificate | TechCrush Cybersecurity Bootcamp | AWS Security Fundamentals

TECHNICAL SKILLS

Cybersecurity: Security Monitoring, Incident Investigation, Vulnerability Detection, Security Assessment, Threat Intelligence, Web Application Security, Risk Assessment

Security Frameworks: NIST Cybersecurity Framework, MITRE ATT&CK, Cyber Kill Chain

Security Tools: Splunk, Wireshark, Kali Linux, SafeLine WAF

Programming: Python, Java, PHP, JavaScript, SQL

Backend Development: FastAPI, Flask, Docker, Git, GitHub, REST APIs
